

Nuance® Equitrac Secure Document Release Print management for every print environment.

Printing should be easy. Users want the ability to print documents from anywhere, anytime and pick up their jobs at the time and location of their choosing. Nuance Equitrac® print management software makes this a reality—and eliminates the risk of private information being left at a printer, reduces wasted paper, resources and money from documents left unclaimed and saves valuable time that can be lost through inefficient printing.

While many print management software platforms can make this happen for some printing devices, print environments inside organizations are not identical. A mix of MFPs and networked printers—often from a variety of manufacturers—requires a variety of methods for releasing print jobs.

Follow-You Printing® with Secure Document Release

A standard component of every Equitrac Office® and Equitrac Express® solution, Equitrac Follow-You Printing® with Secure Document Release supports user mobility while helping to reduce waste and protect personal information or client confidentiality. Follow-You Printing holds documents in a secure print server until users authenticate themselves at the networked printer of their choice, anywhere on the print network—across servers, departments and even geographic boundaries.

Secure Print Release Options for Every Device

Users can retrieve print jobs securely and easily at any printing device on the network through four flexible print release options—ID Controller, PageCounter, Web Release or Embedded Clients—that can be deployed depending on the requirements of the organization.

Equitrac offers the flexibility of deploying Secure Document Release through four print release options to meet printing requirements across all print hardware. Every release option supports user authentication to ensure that print jobs are only released when the user is at the device. From the simple Swipe and Release capabilities of the Nuance ID Controller, through more advanced user control options delivered through the Equitrac PageCounter, Web Release or MFP embedded clients, Equitrac provides convenience and control over output across the entire fleet.

Nuance ID Controller

With the Nuance ID Controller, organizations can incorporate even the most basic output devices—single-function printers—into their secure printing network. Comprised of a small form-factor hardware component that attaches to the back of any printer and a card reader, the ID Controller provides users with the ability to swipe their ID card and release their documents stored in the users Equitrac print queue one at a time—or release all documents in a single step.

Equitrac PageCounter

The Equitrac PageCounter is a compact and flexible terminal for advanced print and copy control at printers or MFPs. It integrates into existing networks and mounts directly on most devices. Used in conjunction with Equitrac Office or Equitrac Express, PageCounter provides a complete solution for print and copy tracking, access control, cost reduction and document security.

With an easy-to-use keypad and optional magnetic card and contactless card readers, PageCounter helps to limit equipment access to authorized users and purposes while accurately charging document costs to the correct user, department, funding source or budget.

Web Release & Mobile Web Release

Complete, secure document release workflows can be accessed from a Web browser at a PC located next to the printer, or from any mobile device browser. With Web Release, users access a Web page that provides a simple user interface to select and access documents held on a secure print queue.

Mobile Web Release extends these capabilities to smartphones and tablets. It provides a mobile-optimized view of Web Release that allows users to initiate print jobs that are held in a secure print queue.

Equitrac Embedded Clients for MFPs

Equitrac offers embedded clients for most major MFP brands, providing users with complete control over print and copy activity from the control panel of the MFP. This provides document security, protection of private information and the mobility and convenience of Follow-You Printing with no external terminals to purchase, install or maintain.

Equitrac embedded clients take full advantage of the MFP embedded software platform to provide maximum control by tracking all print, copy, scan and fax activity, offering network login, PIN or card reader authentication options and providing users with the most available options at the time of print release—including deleting or saving stored print jobs, changing print attributes, adding billing code information and previewing job costs.

With the flexibility of four print release options—whether device-embedded, Web or terminal-based—Equitrac Office and Equitrac Express seamlessly integrates into the existing print and IT infrastructure, regardless of printer or MFP type and brand or authentication technique. And Equitrac is built to scale from small, single-server sites up to multi-location enterprises with thousands of printers and tens of thousands of users.

About Nuance Communications, Inc.

Nuance Communications, Inc. is a leading provider of voice and language solutions for businesses and consumers around the world. Its technologies, applications and services make the user experience more compelling by transforming the way people interact with devices and systems. Every day, millions of users and thousands of businesses experience Nuance's proven applications.

For more information on how Equitrac products can meet your unique needs, please contact us at sales@nuance.com or call 1-800-327-0183.
