

Ricoh Print and Copy Control

NUANCE

The experience speaks for itself™

Fully integrated with Nuance Equitrac Office® and Equitrac Express®, and available for both Ricoh A3- and A4-class MFPs, Print and Copy Control™ (PCC) provides maximum printing convenience, ease of use and output security for users of Ricoh multifunction products. It lowers print costs by supporting control, convenience and choice and lets users just print while letting IT get back to running the business.

USER AUTHENTICATION

Control of MFP activity starts with user authentication, and with PCC, you can easily control user access to MFPs at the function level. PCC makes use of existing authentication systems (such as Active Directory, LDAP or the Equitrac Office or Equitrac Express accounts database) to validate user credentials. To unlock the system, you simply enter a PIN code or network user ID/password directly on the MFP display. Users can also identify themselves with an ID card using optional magnetic card and contactless smart card readers. And, PCC supports single sign-on to some additional embedded applications, which increases user convenience and productivity. With Swipe to Logout, logging off of the application is as simple as swiping an ID card.

TRACK AND REDUCE OUTPUT COSTS

After authentication is complete, you can start a copy, print, scan or fax job, depending on your MFP user access privileges. When the job is complete, information about the transaction is sent to the Equitrac Office or Equitrac Express

Server for centralized accounting and activity reporting. These reports make it easy to recognize opportunities to reduce costs, minimize waste and optimize device deployment.

Document accounting creates a unified view of print, copy and scan activity for all devices on the network and can help to identify and implement savings opportunities such as: enforcing rules for color output or duplex printing; re-directing print jobs from desktop printers to MFPs with lower cost-per-page; allocating job costs to specific users, departments, clients or job codes; and tracking costs by file size, paper size, media type, color and more.

USER CONVENIENCE

PCC transforms your MFP into a secure personal printer, reducing the risk of confidential data falling into the wrong hands. After you authenticate at a device, PCC displays your print jobs, including document properties and costs, on the main Follow-You Printing® screen. From this screen, you can release one or more of your print jobs.

Thanks to Equitrac's Follow-You Printing technology – and the flexibility to use server-based printing or I-Queue -- you can move among various floors, buildings and other locations and still print from any connected MFP, collecting your output at any time, from anywhere. You can also avoid devices that are busy or out of service.

Print & Copy Control supports multiple authentication techniques, including PIN, network ID/password and ID cards.

PCC software installs on the hard disk of MFPs. The PCC application is available for a wide-range of A3-class Ricoh Aficio MFPs, as well as select new A4-class MFPs with the smaller, 4.3 inch touch screen.

INTEGRATED SCAN & PRINT

With PCC, print and scan workflows can now be executed from a single application—reducing time at the MFP and encouraging users to select the most appropriate workflow. This encourages users to print only what they need and scan when they can. Scan & print offerings available with PCC include an optional Capture & Send module, as well as integration with more powerful document capture solutions including Ricoh GlobalScan NX® and eCopy ShareScan®. Powered by integrated print & capture software and delivered through the single PCC interface, the MFP becomes the most convenient way of moving information through a business.

For times when users just need to send scanned documents to their own email address, PCC includes Scan to Me™. With a single button click, authenticated users can quickly and easily send scanned images to their Inbox.

DEPLOYMENT & ADMINISTRATION

Deployed centrally and compatible with a wide range of Ricoh MFPs, PCC fits into any environment. It is built to scale to any size installation— from small businesses to large enterprises with multiple locations and thousands of output devices. Ricoh PCC is the only application you will need, whether you deploy print using print servers or Equitrac's innovative I-Queue printing.

With PCC, the Ricoh multifunction product becomes the hub of an adaptive infrastructure for secure and mobile print release, accurate cost management, and broad-based device management throughout the organization. And, since it is built on Ricoh's Java-based Embedded Systems Architecture, there is no need to install external hardware to the Ricoh MFP.

Control

- Authorize all users and establish permission-based access to MFP features
- Supports existing authentication systems and processes
- Manage total output volumes and eliminate waste
- Capture all MFP job attributes on a page-by-page basis and apply variable rates based on document features
- Multi-language end user screens
- Campus card payment support

Convenience

- Familiar touch-screen experience on Ricoh MFPs
- Submit jobs to a single print queue and release at any device
- Keep documents secure until users authenticate
- Let users roam throughout the organization without worrying about printer drivers and configuration
- Provide instant access to the full power of Ricoh MFPs without having to continually re-enter credentials

Choice

- Deploy server-based, I-Queue or a hybrid printing model with the convenience of a single application
- Access print and scan workflows from a single interface
- Encourage responsible behavior through cost preview and options to delete unwanted jobs
- Centralized deployment and administration

With Ricoh PCC, print and scan workflows can be executed from a single application – reducing time at the MFP and encouraging users to select the most appropriate workflow.
